

Oracle 2020 DB Security Report

2020, DB security report shows that database security is a top priority for organizations. The report highlights the importance of data protection and the need for robust security measures. It also discusses the challenges of managing data security in a complex, multi-cloud environment.

Database security is a critical component of any organization's overall security strategy. It involves protecting data from unauthorized access, use, disclosure, destruction, or modification. This includes implementing strong access controls, encryption, and regular security audits.

The report also discusses the importance of data governance and the role of data stewards. It emphasizes the need for clear policies and procedures to ensure that data is used responsibly and in compliance with applicable laws and regulations. The report also highlights the importance of incident response and recovery planning.

Key findings from the report

One of the key findings from the report is that database security is a top priority for organizations. The report shows that 85% of organizations have a dedicated database security team. Additionally, 70% of organizations have implemented data encryption, and 60% have implemented data loss prevention (DLP) solutions.
