

Pure PowerShell SDK: Find All Disconnected Volumes

This blog was last updated in May of 2017.

5/2/2017 - Added size of disconnected volume output.

5/1/2017 - Fixed bugs.

There are many ways to determine what volumes are connected to a host or host group, but there is no way to easily see via the PowerShell SDK what volumes are disconnected/unused.

PowerShell:

```
[crayon-6514d5d35d675537307288/]
```

Output example:

```
[crayon-6514d5d35d67e126570749/]
```

Download [the script](https://github.com/PureStorage-OpenConnect/powershell-scripts) `Get-DisconnectedVolumes.ps1` from <https://github.com/PureStorage-OpenConnect/powershell-scripts>.

Cheers,

Barkz
