

Where are the Pure Storage SDKs and Toolkits?

I have received a lot of questions recently about the locations of the various SDKs and Toolkits for the Pure Storage® Windows PowerShell modules.

There are two GitHub organizations:

1. **Pure Storage Connect** - GitHub contributions created by Pure Storage Engineering and supported by Pure Storage Support.
2. **Pure Storage Open Connect** - GitHub contributions from Customers, Pure Storage Architects and Engineers.

The different repositories that can be found under each organization is as follows:

Pure Storage Connect

- Pure Storage PowerShell SDK - <https://github.com/purestorage-connect/PowerShellSDK>

Pure Storage Open Connect

- Pure Storage PowerShell-Toolkit - <https://github.com/purestorage-openconnect/PowerShell-Toolkit>
- Pure Storage Open Connect for Microsoft Azure - <https://github.com/PureStorage-OpenConnect/microsoft-azure>

All details related to the various SDKs, Toolkits and the REST API can be found on the Pure Storage Pure1 Community at <https://community.purestorage.com>.
